

# theme('hook', \$arguments)

preprocess functions  
[ set variables & suggestions ]

All variables passed by reference between each preprocess function. As a result, variables are additive building the variables array.

```
suggestion
↓
suggestion.tpl.php
<html>
  <?php print $variable ?>
</html>
```

```
default hook
↓
hook.tpl.php
<html>
  <?php print $variable ?>
</html>
```
